## FIRE BEHAVIOR FORECAST

<b>FORECAST NUMBER</b> 28	<b>TYPE OF INCIDENT:</b> Wildland Fire
<b>INCIDENT NAME:</b> Salmon August Complex	<b>OPERATIONAL PERIOD</b> Day shift 9/16/17
<b>DATE ISSUED:</b> 15 September 2017	<b>TIME ISSUED:</b> 2200
<b>UNIT:</b> Klamath National Forest	<b>SIGNED</b>  Ken Loda, FBAN

### INPUTS

**WEATHER SUMMARY** See the weather forecast preceding.

### FUELS CONDITIONS

The fire has burned in pockets of fuel that haven't seen fire in 60 years, but the southern perimeter is moving into more recent burn scars. Fuels consist of moderate to heavy stringers of mixed conifer, snowbrush, white thorn and manzanita. Brush live moisture is at 100%, conifers 150%. Fine dead fuel moisture is 15-20% at 0700, going to 3-6% by afternoon, 1000-hr fuels are at 7-9%. Many large rock scree areas exist.

### OUTPUTS

#### GENERAL FIRE BEHAVIOR

Poor RH recovery enhanced overnight burning mid-slopes. The fire's main factors are heavy dead and down fuels with steep topography. The recent fire activity has been most dependent upon slope and wind alignment.

Surface fire spread 8-14 ch/hr with headfire and around 1-3 ch/hr backing and flanking. Flame lengths 1-3 ft.

Spotting: Single-tree or group torching is possible, and short duration crown runs with gusts and slope alignment on a headfire. Spotting distance up to ½-mile with group torching or crown fire. Rollout potential exists in many areas. The probability of ignition will be 30% at the start of shift, going to 50% during peak burning conditions in shaded fuels and north aspects, 80% in other environments.

**Local Critical Thresholds:** Today we are meeting two local critical thresholds: RH under 22%, and 1000-hour fuels under 12%. We're flirting with another, temperatures over 79° (lower elevations).

#### SPECIFIC FIRE BEHAVIOR

**Deep Fire (DIV AA):** Fortunately this site is largely protected from most of the general winds. Surface fire spread with transition to torching possible as sun exposure dries fuels throughout the day, especially if gusts reach down. Rollout can enhance fire movement potential.

**Wallow Fire:** Overall limited fire spread potential throughout the day. Interior burnout will continue. All divisions have perimeter areas with steep slopes that can promote rollout. Surface fire transition to torching or crowning is possible in areas exposed to the wind.

**Divisions K, M, P:** **Heads up!** Afternoon winds are likely to push burning conditions to spreads of up to 17 ch/hr, flame lengths 6-10 ft. Winds, therefore direction of spread, could be erratic.

**Division A:** We may see some fill-in on the south aspect of Hell Hole Ridge and the unnamed drainage northeast of Wild Lake. That could be enhanced by our afternoon winds.

**Division V:** In the morning some spread potential southwest down Crapo and Morehouse drainages and Yellow Jacket Ridge, toward the Forks of Salmon and Sawyer Bar Road. Creeping and backing down slope/canyon expected. Afternoon winds should push the fire back into itself.

### SAFETY

**SAFETY** Identify wind and slope alignment for increased fire spread. Rollout and falling fire-loosened rocks.

**AIR OPERATIONS** General gusts and erratic ridge-top winds could complicate operations this afternoon.
